Remote work and im/mobilities through the life-course

Conference panel

Start date : 25 May 2022 09:00

Date de fin : 31 May 2022 17:00

Where : St Petesburg

Hosted by : IUAES 2022

Information sources :

The Covid-19 global lockdown has encouraged a rapid shift towards remote work, and home-based working has become a sudden necessity for many. The wake of the outbreak has seen an increased social acceptance of delocalized working practices, both for workers and companies, leading to new configurations of the interplay between work and mobility. This panel aims to explore the possibilities and challenges emerging at the interplay between remote work and mobility, with the purpose to highlight the significance of the life-course. The panel asks how the interplay between remote work and mobility unfolds at different turning points of life and in the making of trajectories. Remote work is not a new phenomenon, nor its relation to mobility. Some groups, like the 'digital nomads', were exploiting the benefits of location-independent work to lead a mobile life long before the pandemic. The implementation of remote work on a global scale, however, has allowed more people to experiment location-independence and imagine working from "anywhere". It has triggered opportunities to repopulate rural areas, return home for migrants and rethink life projects and routines, introducing mobility practices alternative to commuting, such as running or cycling. How do different temporalities and momentous transitions in the life-course affect the decision to move or stay put, thanks or despite the possibility to work remotely? How do gender, kinship ties and the construction of trajectories shape individuals' decision of im/mobility in the case of remote work?

Abstract The Covid-19 global lockdown has encouraged a rapid shift towards remote work, and home-based working has become a sudden necessity for many. The wake of the outbreak has seen an increased social acceptance of delocalized working practices, both for workers and companies, leading to new configurations of the interplay between work and mobility. Remote work is not a new phenomenon, nor its relation to mobility. Some groups, like the 'digital nomads', were already exploiting the benefits of location-independent work to lead a mobile life before the pandemic. The implementation of new remote-working policies on a global scale has laid out new scenarios, allowing more

people to experiment location-independence and imagine working from “anywhere”. The diffusion of remote work has triggered opportunities to repopulate rural areas, return home for migrants and rethink life projects and routines, introducing mobility practices alternative to commuting, such as running or cycling. This panel aims to explore the possibilities and challenges emerging at the interplay between remote work and mobility, with the purpose to highlight the significance of the life-course. The panel asks how the interplay between remote work and mobility unfolds in the passage through different stages of personal and professional life. The life-course is an interesting aspect of anthropological inquiry, especially for research focusing on specific phases of life (e.g., adulthood, ageing), life transitions (e.g., migration, marriage, death) and their socio-cultural meanings. We need to analyse, however, how people practice remote work in relation to spatial im/mobilities from a life-course perspective. In the face of the new uncertainties imposed by the pandemic both on work and mobility, we aim to draw attention to the different stages and transitions of life as well as people’s capacity and creativity to act upon time and the future. We invite presentations that focus on different forms of remote work (e.g. ITC professionals, academics, digital nomads) and mobilities (e.g. migration, tourism, sport mobilities) and explore the different opportunities and challenges emerging at the interplay between remote work and im/mobility in the life-course. How do different temporalities and momentous transitions affect the decision to move or stay put, thanks or despite the possibility to work remotely? How do gender, kinship ties and the construction of career and life trajectories shape individuals’ decision of im/mobility in the case of remote work?

Convenors: Flavia Cangià and Fabiola Mancinelli

Mobility

For the Mobile Lives Forum, mobility is understood as the process of how individuals travel across distances in order to deploy through time and space the activities that make up their lifestyles. These travel practices are embedded in socio-technical systems, produced by transport and communication industries and techniques, and by normative discourses on these practices, with considerable social, environmental and spatial impacts.

Lockdown

The lockdown measures implemented throughout 2020 in the context of the Covid-19 crisis, while varying from one country to the next, implied a major restriction on people’s freedom of movement for a given period. Presented as a solution to the spread of the virus, the lockdown impacted local, interregional and international travel. By transforming the spatial and temporal dimensions of people’s lifestyles, the lockdown accelerated a whole series of pre-existing trends, such as the rise of teleworking and teleshopping and the increase in walking and cycling, while also interrupting of long-distance mobility. The ambivalent experiences of the lockdown pave the way for a possible transformation of lifestyles in the future.
