This year is the 10th anniversary of our bicycle urbanism Master Class! While we have seen impressive progress across a decade, Copenhagen remains a world leader in cycling infrastructure design, policy, and services. To celebrate these changes and the evolution of bicycle urbanism around the world, Copenhagenize is offering a new specialized technical course focusing on the use of data and observation to meet the users' needs. This intensive three-day immersive course will spotlight best practices using the city as a classroom for experiencing and learning. In a city where cycling is second nature, Copenhagen is the perfect location for this high-level learning.

The winding streets in the historic center are one thing, but the majority of this sprawling European capital features world-class city streets in the world. It is here, like no other city in the world, where inspiration for a bicycle future is on full display, the city shows us visions of how other cities can continue moving forward on a scaled future.

Along with gaining a deep understanding of the ongoing transformation of Copenhagen, this new Master Class will cover various aspects of bicycle infrastructure design, keeping a clear focus on a user-oriented approach and traffic safety, as well as data collection methodologies that allow cities to respond to users' needs. Join the Master Class and learn all about how to create a bicycle-friendly city, going from the macro level all the way down to the micro details.
